

FITS YOU — Brand Book v1

Domain: fitsyou.net **Category:** Personalized meal kits + supplements + custom training, delivered across the US **One line:** A transformation engineered for one body — yours.

1. The Core Idea

The name does the heavy lifting, so we build the entire brand on it.

Fits You = bespoke tailoring, applied to the body.

A tailor measures one person and cuts cloth that fits no one else. We do the same with nutrition, supplementation, and training: measured to you, calibrated to you, made for one. This single metaphor — *the bespoke transformation* — resolves the brief's tension perfectly:

- **Luxury** comes from the tailoring world: precision, craft, made-to-measure, restraint, the feeling of something built for you and no one else.
- **Performance** comes from treating the body as something engineered and capable — measured, calibrated, improved.

Everything downstream (color, type, the logo device, the voice) is an expression of *measured craft made personal*. That is what keeps Fits You out of the mass-market meal-kit lane — competitors sell convenience; we sell a fit.

Strategic note: the homepage hero leads with the *transformation and the fit* — not "fresh meals delivered." Food is the vehicle, not the headline.

2. The Signature Device — "The Fit Mark"

This is the one thing people will remember, and the element that makes generated pages instantly recognizable as Fits You rather than generic SaaS.

The Fit Mark is a pair of precision corner brackets — like a tailor's fitting marks, a camera's crop marks, or an engineer's measurement notation — used to *frame* things:

[content / image
/ stat / person]

It expresses the core promise visually: *this is measured, and it is framed around you*. Used to bracket the hero, frame food photography, mark section starts, and wrap each customer's stats. Rendered in **Brass** for premium moments, **Obsidian** or **Bone** for functional ones. It is the brand's connective tissue — sparingly, never decoratively crowded.

3. Positioning & Messaging

Positioning statement (internal): For people who are done with one-size-fits-all programs, Fits You is a made-to-measure transformation system — meal kits, supplements, and training calibrated to one person's body and goals — that delivers the feeling of something built for you, because it is.

Taglines (primary first):

- **Built to fit you.** ← primary
- Measured for one.
- A plan that fits no one else.
- Your transformation, tailored.

Messaging pillars:

1. **Measured, not assumed** — it starts with your inputs, not a template.
 2. **Made for one** — your kit, your stack, your plan; nobody else's.
 3. **Engineered to perform** — precision in, capability out.
 4. **Quietly premium** — this is for people who take themselves seriously.
-

4. Voice & Tone

Voice: Confident, precise, direct, second-person. Speaks like a great trainer who is also tasteful — knows exactly what they're doing and never needs to shout about it.

Vocabulary to lean on: measured, fitted, calibrated, tailored, built, made-to-measure, precise, dialed in, your fit.

Cadence: Short, declarative. White space in the writing, like the design. One idea per line in headlines.

Voice guardrails (non-negotiable — protects users *and* the brand legally)

These exist for two reasons: they keep the brand healthy and aspirational rather than shame-based, and they keep us clear of FDA/FTC weight-loss and supplement-advertising enforcement.

- **Frame around capability and fit, not thinness or shrinking.** "Stronger, sharper, fits the way you want to feel" — not "drop pounds," "shrink," "burn fat fast."
 - **No shame, no fear, no body-negative language.** Ever.
 - **No implausible or guaranteed outcomes.** No "lose 20 lbs in 30 days," no "guaranteed results," no "without effort." The FTC treats these as facially deceptive.
 - **No medical/disease claims** for supplements (no "cures," "treats," "prevents").
 - **No numbers-as-pressure** (calorie counts, weight targets) presented as goals on marketing surfaces.
 - Outcomes are always shown as *individual and variable*, with a results-vary line wherever a transformation is shown.
-

5. Color System

A palette built for appetite, performance, and luxury at once — and deliberately *not* the black/neon-green gym cliché. Warm, deep, expensive. Food looks incredible against it.

Token	Name	Hex	Role
<code>--obsidian</code>	Obsidian	 #101114	Primary dark base. Hero backgrounds, footers, dark sections. The luxury anchor.
<code>--bone</code>	Bone	 #F5F2EB	Primary light. Warm paper-white. Breathing room, light sections, body backgrounds.
<code>--ember</code>	Ember	 #D9603B	Signature accent. Energy, CTAs, key highlights, the "transformation" color. Warm, appetizing, performance-charged. Use sparingly — it earns attention by being rare.
<code>--brass</code>	Brass	 #B79256	Luxury metallic. The Fit Mark, fine dividers, premium detailing, the logo mark. Never as a fill — always as a line or accent.
<code>--pine</code>	Pine	 #2F3A30	Secondary deep green. Health/credibility grounding, alternate dark sections, supplement context.
<code>--ash</code>	Ash	 #6B6A66	Muted text, captions, secondary UI.
<code>--bone-2</code>	Bone Deep	 #E7E1D5	Subtle fills, cards on Bone, hairlines.

Usage rules

- Dominant relationship is **Obsidian + Bone**. Ember and Brass are accents, never floods.
- Ember:Brass should rarely co-star at full strength — pick one to lead per section.
- Text on Obsidian = Bone. Text on Bone = Obsidian. Ash for secondary only, and never below AA contrast.
- Gradients: avoid. If atmosphere is needed, use a near-black radial vignette or film grain over Obsidian, never a SaaS color-gradient.

6. Typography

Two families, two roles — mapping directly onto the brand's duality.

Fraunces — *the human / luxury / transformation voice*. Used for: display headlines, story headlines, pull quotes, editorial moments. High-contrast, optical, warm, expensive. Set with its `(SOFT)` slightly up and tight tracking on large sizes.

Archivo (and **Archivo Expanded** for impact) — *the engineered / performance / precision voice*. Used for: UI, body, labels, buttons, stats, navigation, all functional text. Architectural and confident. Expanded weights for big single-word statements (e.g. **MEASURED, MADE FOR ONE**).

Both are free on Google Fonts.

Type scale (rem, 1rem = 16px):

Use	Family	Size	Weight	Tracking
Display XL	Fraunces	4.5-6	500	-0.02em
Display	Fraunces	3-3.75	500	-0.01em
Impact label	Archivo Expanded	0.875	700	0.18em, UPPERCASE
H2	Fraunces	2.25	500	-0.01em
H3	Archivo	1.5	600	0
Body L	Archivo	1.125	400	0
Body	Archivo	1	400	0
Caption	Archivo	0.8125	500	0.02em
Stat number	Archivo Expanded	2.5-4	700	-0.01em

Generous line-height on body (1.6). Tight on display (1.05). Type sizes stay comfortably readable — nothing squinty.

7. Logo & Identity

Primary lockup: the wordmark **FITS YOU** set in Archivo Expanded (700), tight tracking, with a single **Brass Fit Mark** notch — a small angular corner bracket — anchored to the lockup. The mark reads as a fitting notch / measurement tick.

Monogram (favicon, app icon, compact spaces): the Fit Mark brackets framing **FY**, or the Fit Mark alone in Brass on Obsidian.

Clear space: minimum of one cap-height of the wordmark on all sides.

Don'ts: no gradient on the wordmark, no stretching, no placing on busy imagery without an Obsidian scrim, no recoloring the Brass mark to Ember.

8. UI Tokens & Components

The feeling is **precision instrument**, not soft consumer app. Sharp, exact, minimal.

```
--radius-sm: 2px
--radius-md: 4px      /* default - keep it tight, no big pill bubbles */
--radius-lg: 8px      /* rare, for large media cards only */

--space scale: 4 / 8 / 12 / 16 / 24 / 32 / 48 / 64 / 96 / 128

--border-hairline: 1px solid rgba(16,17,20,0.12)
--border-brass: 1px solid #B79256

--shadow: none by default. Depth comes from contrast + the Fit Mark, not soft shadows.
           If needed: 0 1px 0 rgba(16,17,20,0.06) - crisp, never blurry/floaty.
```

Buttons

- **Primary:** Obsidian fill, Bone text, 2-4px radius, Archivo 600, generous horizontal padding. On hover: Ember fill.
- **Secondary:** hairline border (Obsidian or Brass), transparent fill, fills on hover.
- No glassmorphism, no soft drop shadows, no gradient buttons.

Cards: Bone or Obsidian, hairline border, optional Fit Mark in a corner. Square-ish, precise.

Dividers: 1px Brass hairlines for premium sections; Obsidian/Bone hairlines elsewhere.

9. Imagery Direction

Food (meal kits — the appetite hero)

Shot like fine dining meets editorial still life. **This is where the brand seduces.**

- **Background:** Obsidian or deep Pine, never white. Dark, moody, premium.
- **Light:** dramatic single-source side light, soft falloff, real shadows. Steam, gloss, fresh texture catching the light.

- **Composition:** overhead or low three-quarter, generous negative space, one hero kit per frame, ingredients arranged with intent (raw + prepared in the same frame to signal "kit").
- **Color:** warm Ember-leaning tones in the food itself, fresh greens, against the dark base.
- **Framing:** Fit Mark brackets framing select shots.
- Always feels expensive, never stocky-bright or fast-casual.

People

- Strong, capable, confident — not grinning stock models. Mid-action or composed stillness.
- Premium athletic wear, natural light, real texture.
- Diverse, aspirational, mature in feel without ever labeling age.
- Confidence over before/after voyeurism.

Generated-image discipline

All AI-generated imagery is **placeholder** until real photography exists. Any image standing in for a real customer must be visibly labeled **SAMPLE** and must never appear on a live page as a real person/result. (See §10.)

10. The Story System (compliant by design)

The transformation stories are central — but every story shown publicly must be a **real, consented customer**. We build the *system* now and fill it with real people as they arrive. This is not optional polish; fabricated testimonials and AI-generated "customers" for a weight-loss/supplement brand are directly targeted by the FTC's Consumer Review Rule (in effect since Oct 2024, civil penalties ~\$53K per violation, active enforcement as of late 2025).

Story data model (fields each real story fills)

- First name + first initial, city/state
- Plan type (kits / stack / training combo)
- Timeline (e.g. "month 4")
- The starting point — in their words, framed around how they felt, not a weight number
- The turning point — the moment it clicked
- A favorite kit or ritual
- Where they are now — capability-framed ("hiked Rainier," "back to deadlifting," "energy through the afternoon")
- Consent record (date, signed release on file)
- A **results vary** disclosure attached to every card

Display treatment

- Each story bracketed by the Fit Mark — literally "framed around them."
- Fraunces pull-quote + Archivo metadata.
- Real photo only. Placeholder cards in mockups are labeled SAMPLE – replace with real customer.

Collection playbook (for compliant real stories)

1. Get explicit written consent + image release before publishing.
 2. Never pay for or incentivize a *specific sentiment* (you may thank participants, but not "give \$50 for a 5-star story").
 3. If a storyteller is an employee/insider, disclose the connection.
 4. Keep raw claims plausible and individual; attach results vary.
 5. Keep the signed releases on file.
-

11. Public Page Architecture

Admin/back-office is **out of scope** — it ports from the GuideKin/LumZen pattern. Everything below is the green-field public experience.

1. **Home** — hero leads with the personal transformation + the fit ("Built to fit you"), Fit Mark framing, one stunning kit shot, the personalization promise, social proof slot (real stories), quiet credibility.
 2. **How it fits** — the measured → calibrated → delivered flow (intake → plan → kit + stack + training). The "engine" made visible.
 3. **The Plan Builder** — the interactive intake ("c" from your answer: this is where the bespoke feeling lives). Multi-step, precise, satisfying. Outputs a sample tailored plan.
 4. **Meal Kits** — the food, shot beautifully. The appetite page.
 5. **Supplements** — the personalized stack, premium and clinical-calm (claims-safe).
 6. **Training** — custom plans tied to the food.
 7. **Stories** — the story system (real, labeled placeholders in mockup).
 8. **Pricing** — clear, confident, no dark patterns.
 9. **Trust/FAQ** — compliance-friendly, plain answers, results-vary, how data is used.
-

12. Do's & Don'ts

Do

- Lead with fit and transformation; let food seduce as the vehicle.
- Use Obsidian + Bone as the world; Ember and Brass as rare punctuation.
- Frame with the Fit Mark. Keep radii tight. Keep it precise.
- Keep type readable and confident. Lots of negative space.

Don't

- No purple/blue SaaS gradients, glassmorphism, soft floaty shadows, pill-everything.
- No Inter/Roboto/Arial/Space Grotesk.
- No fabricated testimonials, AI "customers," or implausible result claims.
- No shame/fear/thinness language. No medical claims on supplements.
- Never state the target age on any surface.
